B.S. Computer Science, Concordia University St. Paul • GPA: 3.85 • Dean's List • May 2026

SUMMARY

Recent Computer Science graduate with hands-on experience in software engineering, production support, Python automation, Linux troubleshooting, cloud exposure, and test engineering. Skilled in SQL investigation, root-cause analysis, CI/CD workflows, monitoring concepts, and backend development in multiple languages. Interested in software engineering, SRE, platform reliability, automation, and supporting systems that teams depend on.

TECHNICAL SKILLS

Languages: Python, Java, C#, TypeScript, JavaScript, SQL, PHP, HTML, CSS

Frameworks: ASP.NET Core, Spring Boot, Express.js, React, Node.js, Playwright, .NET

Cloud & DevOps: Azure, Docker, Kubernetes, GitHub Actions, CI/CD, Linux

Monitoring & Data Tools: Splunk, Prometheus, Power BI, MySQL, MongoDB Atlas

Concepts: OOP, REST APIs, OAuth 2.0, JWT, TDD, Page Object Model, Agile/Scrum, incident troubleshooting, root-cause analysis

EXPERIENCE

Systems Analyst – IT Sam's Club Distribution Center, Shakopee, MN *Jul 2024–Present*

- Write and maintain Python automation scripts for production data workflows, reducing manual processing overhead and improving workflow reliability.
- Troubleshoot production issues across data workflows, Linux-based environments, cloud platforms, and application support processes.
- Use SQL, Splunk, Prometheus, and operational dashboards to investigate issues, monitor workflow trends, and support root-cause analysis.
- Work with Azure and Kubernetes-based environments while documenting findings, communicating with technical and non-technical stakeholders, and supporting reliability improvements.

Web Developer Intern Minnesota Historical Society, St. Paul, MN *Jun 2025–Sep 2025*

- Designed and shipped multiple public-facing pages using HubSpot, Drupal, and WordPress from scratch.
- Wrote custom JavaScript, integrated third-party APIs and web forms, and performed QA on all delivered pages.
- Managed content updates and page publishing workflows while coordinating feedback across design and technical requirements.

PROJECTS

Quaver – Music Recommendation App *Node.js, TypeScript, MongoDB, Playwright, OAuth2.0*

- Built a full-stack app with JWT auth, Spotify OAuth 2.0, and a scheduled data pipeline deployed to cloud with GitHub Actions CI/CD.
- Wrote a cross-browser Playwright E2E test suite in TypeScript using Page Object Model across Chromium, Firefox, and Webkit.

EventFlow – Event Tracking Backend *Spring Boot, Kafka, MongoDB, JUnit 5, Mockito, Docker*

- Built a REST API with async Kafka event streaming, MVC architecture, MongoDB persistence, and JUnit 5 / Mockito test suites.
- Decoupled event producers and consumers for independent scaling, managed with Docker-orchestrated local infrastructure.

Building Pricing Tool – ASP.NET Core Web App *C#, ASP.NET Core, Razor Pages, .NET, OOP*

- Built a Razor Pages web app that calculates building estimates using C# OOP model classes, input validation, material pricing logic, and detailed cost breakdowns.
- Extended with a C# → CSV → Python → Fusion 360 pipeline to auto-generate a 3D building model from web form inputs.

Banking DSL – Domain-Specific Language Interpreter *Python, Lexer, Parser, AST, unittest*

- Built a compiler-style pipeline with a lexer, parser, AST, interpreter, EBNF grammar, and a 7-test unittest suite.
- Modeled financial operations including deposit, withdraw, balance, and account creation by translating business rules into executable code.
